# HIGH COLLAGEN Amino Boost<sup>®</sup>

Collagen booster with a biomimetic amino acid complex,  
epigenetically active plant compounds & hyaluronic acid

Select other languages

## How HIGH COLLAGEN Amino Boost works

### 1. VeCollal® provides collagen building blocks

A blend of fermented, biomimetic amino acids supplies the essential building blocks required for collagen formation.\*

### 2. Supports natural collagen production

Inducers and epigenetically active plant compounds (Centella asiatica, Panax ginseng, and vitamin C) support the body's natural collagen synthesis.

### 3. Enhanced hydration

Hyaluronic acid improves skin elasticity and hydration, strengthens the skin barrier, and supports joint function.

## Precious ingredients:

### VeCollal®

Provides the body with the amino acids required for collagen production.

### Vitamin C

Contributes to normal collagen formation and healthy skin function.

### Hyaluronic acid

Binds moisture intensively, improves skin elasticity, reduces the appearance of fine lines, and supports tissue structure and joint lubrication.

### Centella asiatica (Gotu Kola)

Supports collagen formation, improves skin elasticity, promotes wound healing, and strengthens connective tissue. May contribute to firmer skin and improved microcirculation.

### Panax ginseng

A traditional Asian plant known to support vitality, energy, and resilience.

*\*HIGH COLLAGEN Amino Boost contains all essential and non-essential amino acids – with the exception of asparagine, which the body can naturally produce from aspartic acid.*

Do yourself some good and help your body produce more collagen!

## HIGH COLLAGEN Amino Boost

### How is collagen absorbed?

It is important to understand that collagen is never absorbed by the body in its “whole” form. Whether derived from animal sources or from HIGH COLLAGEN Amino Boost, it is first broken down in the digestive tract into individual amino acids and short peptides.

These building blocks then pass through the intestinal wall into the bloodstream, where they are utilized by the body as needed – including for collagen synthesis, as well as for the synthesis of enzymes, neurotransmitters, and hormones.

The body is inherently capable of producing collagen, provided it is supplied with sufficient high-quality amino acids.

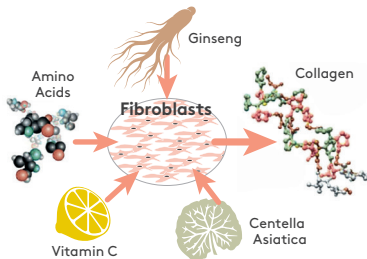

This is exactly where HIGH COLLAGEN Amino Boost comes in: The innovative formula contains a biomimetic collagen amino acid complex that directly provides the body with the building blocks required for collagen synthesis.

Unlike conventional collagen, these amino acids do not need to be broken down first, enabling efficient absorption and immediate availability for the body’s own collagen production.

In addition, HIGH COLLAGEN Amino Boost contains selected inducers, including epigenetically active phytochemicals, which support the body’s natural collagen-forming processes and further optimize amino acid availability.

**HIGH COLLAGEN Amino Boost provides the foundation for targeted and effective support of the body’s natural collagen production.**

**Its mechanism of action has been supported by multiple clinical studies.**

HIGH COLLAGEN Amino Boost is an innovative formula containing fermented amino acids as well as epigenetically active phytochemicals.

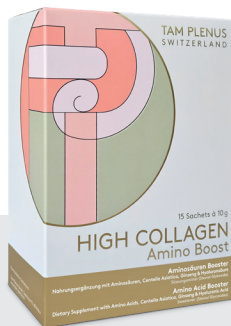

It specifically supports the body's natural collagen formation for beautiful skin, hair and nails, firm connective tissue, and healthy tendons, joints, muscles, and bones.

The combination of amino acids, vitamin C, ginseng, and plant-based actives promote regeneration, vitality, and a youthful appearance.

Amino acids are the building blocks of proteins and are required by the body for the formation and regeneration of tissues, as well as for the production of enzymes, hormones, and essential signaling molecules.

## Product features:

- vegan
- sugar-free & free from additives
- high protein content
- contains all essential and non-essential amino acids\*
- gluten-free & lactose-free
- no artificial flavors or preservatives
- natural fruit powders for a pleasant taste

## Usage:

- 1 sachet daily
- mix with 2.5–5 dl of water and enjoy chilled
- 1 box contains 15 sachets
- a course of at least 3 months is recommended
